- Holds up to four 20 VA transformers
- Indoor or outdoor use
- ETL Listed

FEATURES

ACCESS CONTROL SOLUTIONS

Postal and Fire Department lock boxes provide a convenient method to allow postal workers and Fire Department personnel access into a property through an automated gate system. The 1200 transformer box is a great way to provide a power source for accessory transformers used with access control systems. The DKS model 1819 is a single call telephone entry system that automatically calls a preset number with just the push of a button. The external alarm reset box is used with vehicular gate operators and provides an easy method to reset a gate system that is in a hard shutdown condition. This external reset **MUST** be installed in the line-of-site of the gate operator.
